

D-3300 SERIES

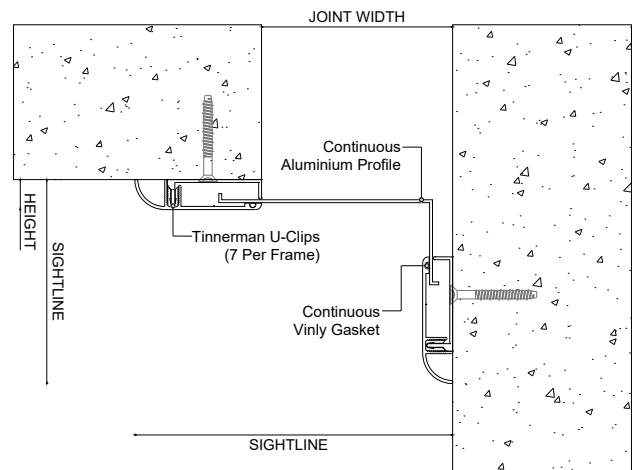

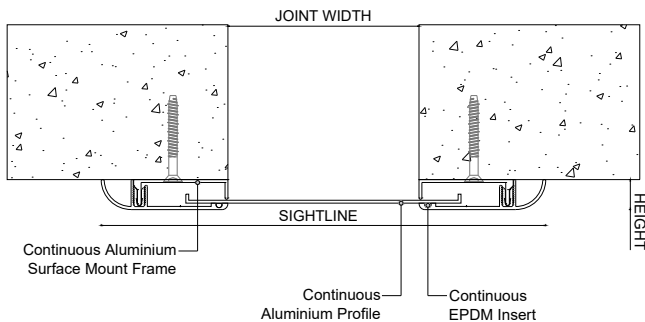

ARCHFLEX D-3300 series wall + ceiling expansion joint system is designed for drywall applications or can be surface mounted to use on additional wall types.

The D-3300 series provides a clean, continuous finish that blends smoothly with interior surfaces while accommodating necessary building movement. Its flexible configuration allows for consistent performance across vertical and horizontal transitions. The system is engineered to maintain its appearance over time, even in areas exposed to frequent activity or environmental changes. Installation is straightforward and compatible with standard construction methods, making it suitable for both new projects and retrofit conditions. Additionally, the profile integrates well with various finishing materials, supporting design continuity throughout the space.

In addition to standard aluminum and stainless steel constructions, optional fire-rated barriers, acoustic seals, and vapor-tight gaskets can be integrated to enhance the system's performance in specialized environments such as healthcare, laboratories, or cleanrooms. These accessories provide added protection against fire, sound transmission, and air leakage across the joint.

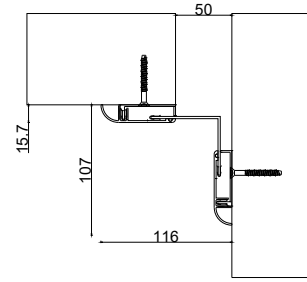

MODEL	JOINT WIDTH	HEIGHT OPTIONS	SIGHTLINE	TOTAL MOVEMENT
